

UNFOLD

Prague's parks and gardens always provide a warm welcome. To locals and tourists therefore, they are a source of inspiration for this design.

Many of us rush through our days hardly noticing city objects around us. This design is meant to blend discreetly with the surroundings while it also brings sophisticated and elegant elements borrowed from nature. The lightning structural frame with the hollow and airy profile resembles to a young tree; their main feature is the graceful upper curve representing leaves unfolding in spring.

The solution combines simple and durable materials to ensure longevity. The galvanized steel supporting frame is extruded and then bent with a twist before being powder coated to achieve graphite-like gray color with a satin finish. The wooden seat and stand supports add a warm touch, the transparent elements are made of tempered safety glass with a tinted roof layer to protect from the sun.
